

# FREE PRINTABLE LENORMAND CARDS

[petervodden.blog](https://petervodden.blog)

This free “Print & Play” Lenormand deck is the 2025 revised version of my Extended Lenormand deck. Updates for this version are:

- (1) The graphics have been sharpened slightly.
- (2) The card frame now includes a white border for easier trimming from the A4 sheet.
- (3) The suit symbols and numbers are of a standard size for traditional games.
- (4) The card back design is now symmetrical, better supporting traditional games.

The deck is supported by a variety of free downloadable resources including:

- A Lenormand Companion (PDF Booklet)
- Memorising the Lenormand Cards (PDF Booklet)
- The Lenormand Memory Palace A2 Poster (PDF 4 x A4 sections)
- The Lenormand Memory Palace A2 Poster (single PNG image)

**For more information please visit my project page at:**

**INSTRUCTIONS:** This PDF is designed to be printed on A4 Portrait sized paper or card. Cut guidelines are provided for separating the cards using either a guillotine, rotary cutter, or hobby/exacto knife, ruler and cutting board. It is recommended that you print out the Test Page on its own as a first step – just to check that the scaling on your printer produces the correct size assets.

The cards should come out at 63mm x 88mm, or “standard poker” which is the same size as (for example) Magic The Gathering or Pokemon - hence these cards will fit nicely into plastic sleeves designed for those games. Sleeving your cards will provide a robust and durable deck. When sleeving, you can print on paper and slip an old poker card behind the paper to provide rigidity. Alternatively - for a small cost - you may wish to use any online print-on-demand service to get this PDF printed out on 300 gsm card stock, which is approximately the weight of commercially produced playing cards.

A sheet of card backs is included, in case you wish to print both sides (on 150 gsm) and sleeve them back-to-back in transparent sleeves. Just print sheet 8 as many times as you need.

Concept, design, layout and PDF production by Peter Vodden: (<https://petervodden.blog/>)
